Signature Landscape Services, Inc is the newest EnviroStar!

Commercial property owners now have a certified landscape company that offers a sustainable landscape maintenance program....

Signature Landscape Services offers commercial clients something new for their landscape maintenance: pragmatic experience working with the Northwest environment to create sustainable landscapes. A sustainable landscape builds on and supports natural assets for healthier plants and spaces for people. Signature Landscape Services has reduced chemical and fertilizer usage by evaluating the unique soil, water and plants requirements of each site. Familiarity with their client's properties keeps the company ahead of weed or fertility problems, using soil and plant friendly mulches or compost to nip their chemical usage in the bud.

The company has recognized a growing demand for greener landscaping services that protect natural resources and provides clients classic landscaping and sustainable maintenance options. Descriptions of the options are at www.signaturels.com, or call 425-868-5885.

This careful, yet practical, consideration given to their garden chemical use has earned this new member a 3 Star EnviroStars rating - and staff are shooting for all five stars. The company has reduced their chemical stocks and purchasing using a centralized inventory for the three company locations, and employees already use chemicals sparingly for weeds. They also compost green waste to provide a high quality source of soil amendments and mulch, controlling weeds and reducing fertilizer needs.

As an EnviroStar member, Signature Landscapes has joined a growing list of almost 600 companies offering services and a way to support environmentally sound businesses. EnviroStars are given a [two-to-five star rating](#) based on their commitment to reducing hazardous waste. Consumers who want to shop at environmentally responsible businesses can look for the EnviroStars decal, or find a business at

www.envirostars.org or by calling 1-877-220-7827 (STAR).

Nationally recognized, the EnviroStars Program certifies businesses for reducing, recycling, and properly managing hazardous waste. The program was created by the Local Hazardous Waste Management Program in King County, Washington in 1995 and has expanded to include counties in the Puget Sound region.
